Supremacy

In every line of human endeavor some one man stands out ahead of the crowd.

In the manufacture of golf shafts, unbiased critics say William Burke stands supreme. Nor is this to be wondered at when you consider that his master mechanical mind is ballasted with years of practical experience.

Early in the industry Mr. Burke recognized what other manufacturers are just beginning to learn — the excellence of a golf club lies in its shaft. Unless the shaft is properly seasoned, shaped, fitted and finished, the club itself cannot give satisfaction.

The "know-how" of shaft making has made Burke Shafts famous throughout the golfing world. Although we wholesale more shafts to other club manufacturers than all other shaft makers combined, we have never been able to fully supply the demand for Burke Shafts in the United States, Scotland, England and Canada.

So when you buy a **BURKE** Golf Club you are not buying merely a golf club — you are investing in the sure results of expert wood selection, proper seasoning and a thorough knowledge of manufacturing.

Guarantee

We guarantee all **BURKE** Clubs and agree to replace or repair without charge any Grand Prize, Endgrain, Vardon or Taylor club shown in this catalog which, after proper use, shows any defect in material or workmanship.

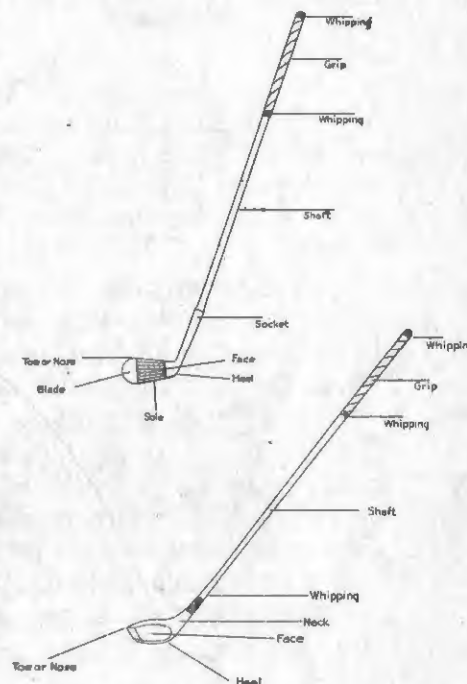

A Much-Abused Custom

It has been the custom of some Sporting Goods and Department Store Salesmen (but not Professionals), to replace clubs without question or examination as to how the club was broken, and then return same to the manufacturer for replacement or repairs **Free of Charge**.

Hereafter, any defective or broken club returned to us, will not be replaced or repaired **Free of Charge** unless in our judgment we find that it was caused by defective material or workmanship. The club must be returned to us prepaid and within ten days after defect is apparent.

We are obliged to take this stand as very often clubs are returned to the store for replacement as defective after being accidentally broken or awkwardly used by the player. This frequently happens when the club is struck too near the toe, heel or neck. This will break almost any wood club, head or shaft.

For the convenience of store salesmen or customers, the descriptive cuts set forth at right shows what is meant by toe, heel or neck of the club, these being the places where clubs are most frequently broken through fault of the player.

Ask your dealer or professional for Burke Clubs and be sure you get them. If there is no Burke dealer or Burke professional near you, order direct from us.

Men's Clubs will always be sent unless women's are specified in the order. See pages 14 and 15 of catalog for Lady Burke Grand Prize Clubs.

Right-hand Clubs will always be sent unless left-hand Clubs are specified in order. For any special models not listed, additional charge will be made.

Please state how order is to be sent; whether by freight, express or mail. Kindly address all communications to

THE BURKE GOLF COMPANY, NEWARK, OHIO

Clubs

Burke Golf Clubs received the highest award at the Panama Exposition because of their superiority of quality, workmanship, finish, balance and "feel." And so we introduce Clubs knowing them to be exactly what the prize judges, who were themselves expert golfers, said they are — **the most superlative perfect golf clubs manufactured.**

The advanced golfer will be quick to recognize, in the Club, the unexplainable "feel" that makes a club priceless to the owner. The novice can pin his faith to the Club knowing that it is the last word in golf club manufacture.

Description

THE SHAFTS are selected by Mr. Burke personally, from our Extra Select Shafts. They are seasoned thoroughly and are subjected to repeated tests both in the rough and when finished; thus absolute perfection in quality, balance and feel is assured.

THE WOOD HEADS are turned from selected air-seasoned persimmon free from knots and all imperfections and subjected to rigid inspection. The brass used on the Brassies and Spoons is made to order for us after our own formula.

THE IRON HEADS are hand forged by highly skilled Scotch smiths from the highest grade Swedish iron. These are rigidly inspected as to lie, loft, weight and measurement after each process of forging, grinding and polishing. In addition to the usual riveting they are perfectly joined with the shaft by our special preparation, Shuron.

THE MODELS — Vardon, Ray, Taylor, Braid, Butchard and other famous experts are responsible for this important factor.

THE FINISH — Every shaft is finished by our secret process; the only method known whereby the shaft is rendered waterproof. Wood heads are finished Natural, Brown, Walnut, Mahogany, and Ebony. Iron heads are highly polished.

GRIPS — These clubs will be gripped with our specially prepared smooth Russia calf leather. Gold cape, split calf, or sheep grips furnished as desired.

THE TRADE MARK — is stamped on every club. Under no consideration will any other brand or trade mark be affixed.

FINAL INSPECTION of each club is made by expert club makers. Each process of manufacture is rigidly inspected and the finished club is finally passed upon by the most competent expert obtainable.

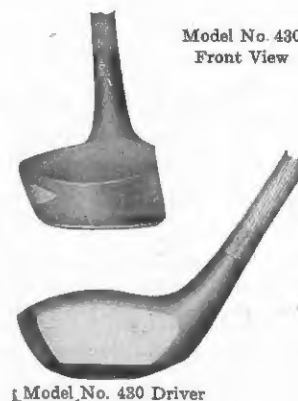

Wood Clubs

All of these models are made for right and left-hand players. Be sure to state which is wanted.

For Lady Burke Grand Prize Models, see pages 14 and 15.

No. 852 Ray Driver
No. 854 Brassie

Brassie-Drivers

A brassie-driver is made for the player desiring a wood club to use both off the tee and on the fair green.

In length, weight, lie, loft and character of shaft it is a compromise between a brassie and a driver.

The half brass sole gives it the same protection that a brassie needs.

Made from all the foregoing Driver models.

400 Plain Face

Perhaps It Is Here

There comes a time in every Golfer's life when he knows he should have some one or more special clubs. When you arrive at that conclusion—get the club you want. The mere possession of it will give you confidence in it and the better will be your game. But there is a vast difference between "special clubs" and "freak clubs"—avoid the latter. Pin your faith to a "Burke" for they are correct. If the club you want is not on these pages, tell us exactly what you want and we will endeavor to make it to suit you.

Burke Balista

Steel Face With Resilient Insertion

Between the steel face and the wood head is a layer of material prepared from a secret formula which imparts life and resiliency to the striking surface, thus increasing the velocity of the ball. The ordinary steel-faced club presents an unyielding surface which adds not a bit to distance, but the Burke Balista with its elastic insertion gives you from 15 to 25 yards extra. The Balista steel face is compressed, corrugated, finely tempered and extremely active, thus making it stronger and more resilient than the ordinary solid steel facing. Unquestionably this is the longest driving club made with the exception of the Burke Endgrain. It is especially valuable to the player using a short swing.

No. 24 Burke Balista Driver, small head with deep face, medium lie.....	\$5.00
No. 25 Burke Balista Brassie, mate for No. 24 Driver.....	5.00
No. 84 Burke Balista Driver, medium size head, with long narrow face, upright lie.....	5.00
No. 85 Burke Balista Brassie, mate for No. 84 Driver.....	5.00
No. 86 Burke Balista Spoon, small head, deep face, frequently used in place of a Brassie for distance and height.....	5.00

Ivor Face

Special attention is called to this particular facing in that it will not easily check or crack due to climatic or other conditions. Made only in Models 34 and 35 which are best adapted to this style of facing.

No. 34 Driver, medium size head with pointed nose, medium lie, medium depth and width face.....	\$6.50
No. 35 Brassie, mate for No. 34 Driver.....	6.50

Burke Endgrain Wood Clubs

The Club of Greatest Distance

Has it ever occurred to you why a mallet or maul is made this way  instead of this way  ?

Now that you think of it, you know it is because the **end-grain** of hard wood has greater resiliency and solidity than the sidegrain — actual government tests demonstrated that it has 27% more.

Applying this thought to a golf club, it is at once apparent that a ball can be driven a greater distance when struck the **endgrain** way of the club head than the sidegrain way.

The entire head of a Burke Endgrain Club, from face to back and from toe to heel, is entirely of **Endgrain** wood, the grain being at right angles to the face and running along the line of the stroke; the neck is entirely of straight-grained hickory or dogwood, the grain running along the neck.

Thus the face presents to the ball an entire uniform surface every point of which is of exactly the same resiliency and solidity. It is infinitely superior in this respect to heads provided with inserts such as fibre, ivory, wooden pegs and other makeshifts, because the latter lack uniformity in the driving power of the inserted materials with that of the wood in the head itself.

The only supposed value of the insert is its greater driving power which must therefore differ from that of the wood in the head itself. It is well known that at the time of impact in the stroke the ball is flattened so that contact with the face occurs in the shape of a circle of equal diameter to that of the ball struck.

Therefore the impact is shared by the parts of the face differing in resiliency, and a direction or twist may be imparted to the ball absolutely impossible to calculate. This disadvantage is never found in using the solid **Endgrain** head.

The Burke Endgrain Club is the result of careful, painstaking study and experiment. The golfer is yet to be found who denies the greater distance, the better, sweeter feel of stroke that it yields.

It is not unsafe to say that every golf club maker in the country would adopt the **Endgrain** idea if it were not for the fact that the **Endgrain** Golf Club head is fully protected by patents and can be manufactured only by us.

If you want to add at least 25 yards to your driver and brassie shots use a Burke **Endgrain**. See illustration and prices on next page.

Each..... \$4.50

Burke Endgrain Hammer Head Putter

The Burke Endgrain Putter is the only scientifically correct wood putter manufactured, due to the **Endgrain** way as described on page 8. (See cut page 16.) There are two objections to ordinary wood putters:

First; a certain deadness or hollowness in the concussion between ball and head due to a lack of solidity in the wood, and secondly, the size of the head diverts the eye from the ball and its line of approach to the hole.

The Burke Endgrain Putter has neither failing. The stroke is solid, the impetus given is certain and uniform and the smaller head with the direction band upon it seems greatly to engage the eye with the line of approach. The ball rolls with a slight drag, clings tightly to the turf and drops surely if only on the edge of the hole.

This is the first hammer head model wood putter placed on the market which seems to meet the needs of this type of putter. It is centrally shafted with a fibre direction line but special attention is called to the method of weighting the head. Great care has been exercised in distributing the weight so that the putter in the stroke hangs perfectly true. It is a very handsome club, proving very popular with good golfers.

No. E-4 Burke Endgrain Centrally Shafted Putter, natural, brown, ebony, walnut or mahogany finish..... \$4.50

Special Iron Clubs

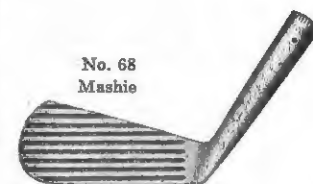

Burke Shur-Stop

The very latest models made in mashie, mashie-niblick, pitcher, driving iron, cleek, and niblick. These heads impart the desired back spin to the ball, resulting in drop dead approach shots impossible of execution with the old style of approach irons.

The professional can use the ordinary scored irons and give the ball the desired back spin, but this is difficult for the average amateur player to accomplish, hence the Burke Shur-Stop accomplishes it for him. No other club in the world will improve your short game so much as the Burke Shur-Stop, and ten to one that's where you are weak.

Made in right and left hand, except No. 76.

- ✓ No. 68 Mashie (see cut)
- ✓ No. 70 Mashie Niblick
- No. 73 Pitcher.....
- No. 74 Driving Iron
- No. 75 Cleek.....
- No. 76 Niblick (see cut).....

Burke Push Iron

This club is made from the celebrated Montmorency model and is shown in cut No. 71. It is being used largely by the more advanced players.

- No. 71 Push Iron (see cut).....

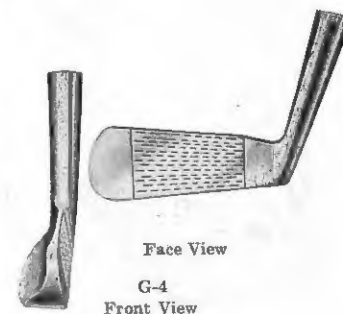

Special Putters

Advanced golfers agree that good putting is the result of confidence. The professional golfer places more reliance upon his putter than any other club in his bag.

The following special putters are furnished in men's or women's weights, in right or left hand, and in flat, medium and up-right lies.

Gun Metal Putters

- No. G-1 Straight Neck and Face, similar to No. 18 Iron Putter
- No. G-2 Flange sole
- No. G-3 Musselback type, reinforced along sole at center
- No. G-4 Heavy flange sole. (See cut)

HARRY VARDON

Six Times World's Champion
Endorses Burke Clubs

TO AMERICAN GOLFERS:

I take pleasure in writing these few words of introduction for The Burke Golf Company. A personal acquaintance with Mr. Burke and his company, of several years standing, and a knowledge of him by reputation for many more years, warrants me in commending to all interested in golf, the goods sold by this company.

In these days of tremendous expansion of the game, especially in your great America, the tendency of the golf maker is toward quantity at the expense of quality.

It is therefore a source of much satisfaction to find a concern actuated by different ideals. Such is The Burke Golf Company, which is seeking constantly, not greater production but higher perfection.

For this very reason, I have found it expedient to withdraw permission from two manufacturers to use my autograph on their product, and have made The Burke Golf Company my exclusive distributors in the United States and Canada. Be warned hereafter not to buy any Vardon autograph clubs except from The Burke Golf Company or its known customers, because my autograph signature has been registered in the United States and Canada. No Vardon clubs are genuine without my registration number 109,817.

In concluding, I wish to commend to your favor The Burke Golf Company.

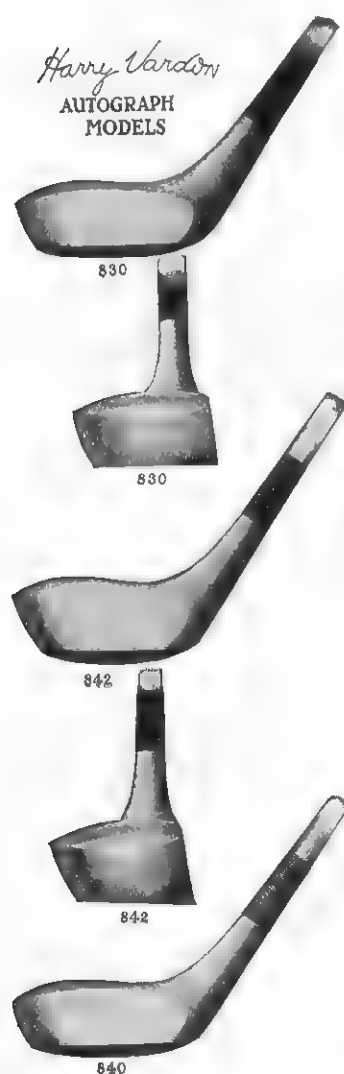

Faithfully yours,

Harry Vardon

Harry Vardon Clubs

For those who prefer imported clubs, we have arranged with Mr. Harry Vardon to represent him in America. As stated in Mr. Vardon's letter on page 18, Harry Vardon clubs may now be had, in the United States and Canada, only from us or from our authorized dealers. Should any dealer or professional offer you a Harry Vardon model be sure to determine whether or not he is a Burke dealer or professional before buying (otherwise the club offered is either not a genuine Harry Vardon or is an old stock club made long before the registration of the Harry Vardon Autograph in the United States). See always the autograph stamp as follows:

Harry Vardon

Registration No. 109,817

It is well known to all golfers who have studied the method and play of Mr. Vardon that his own favorite model of wood clubs is a splice. This, he not only recommends but uses exclusively. Therefore the following models in the splice are exactly the same as used by Mr. Vardon in his practice as well as championship play:

No. 830 Spliced Driver..... \$4.50
No. 832 Spliced Brassie..... 4.50

Many players, however, do not like the spliced model. For this reason, Mr. Vardon has gotten out a socket model similar to the No. 830 splice.

No. 840 Driver..... \$4.25
No. 842 Brassie..... 4.25

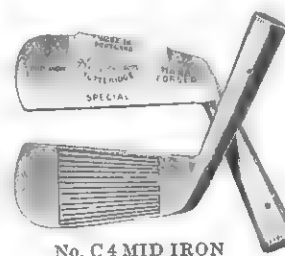

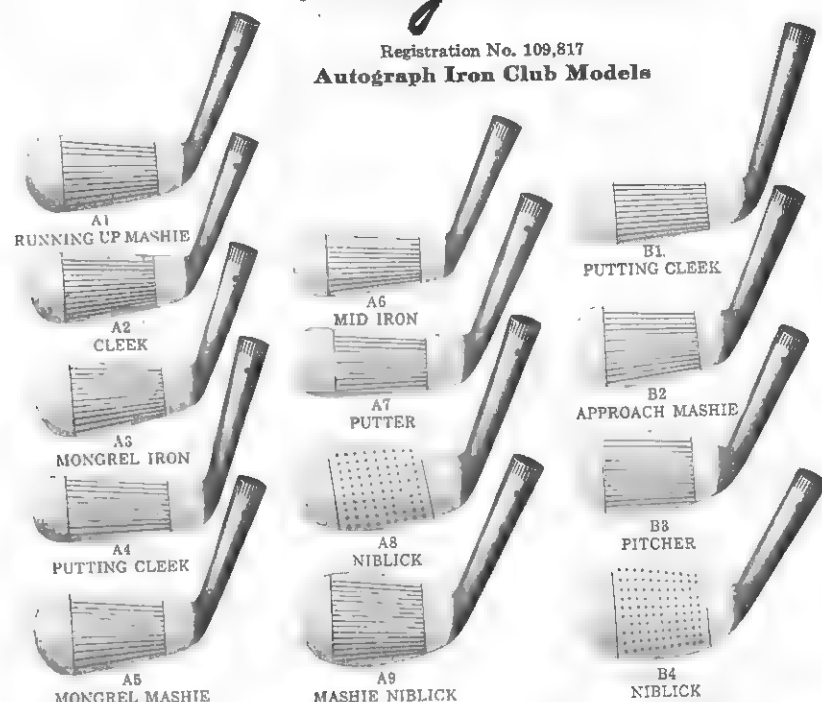

Mr. Vardon's Spoon models are also made in socket and splice. These are handsome models and are very much in demand in Great Britain. (Fibre face.)

No. 856 Spoon (splice)..... \$4.75

J. H. Taylor Clubs

Another famous imported club is the J. H. Taylor Model. Here again we are fortunate in being American representatives for one of the best lines made abroad. Mr. Vardon and Mr. Taylor insist upon us representing them because they know that the name Burke as applied to golf clubs and shafts is recognized throughout America and Europe as the sign of Quality. To be certain you are getting the genuine J. H. Taylor, go to the Burke dealer or professional nearest you, or send to us. The genuine is identified by the signature of

Confidus Spoon

The Confidus Spoon is an exclusive specialty belonging to Champion J. H. Taylor. It is not a freak club as it has a perfectly good reason for its existence. The bulge on the sole is covered with brass plate and is designed for getting the ball out of cuppy lies, and it does it.

This club has had a very heavy sale in the United States and is justly popular in Great Britain.

Prestwick Clubs

This grade, while not so good as the Burke Grand Prize Grade, compares favorably with the so-called high-grade clubs of other manufacturers.

Our Prestwick Club is far better than the average club that ordinarily sells for a higher price.

The iron heads are drop-forged steel, worked over and finished by competent smiths, and are made in a fair assortment of models; of Mashies, Mid Irons, Putters (straight and goose neck), Cleeks, Niblicks, Putting Cleeks, Mashie Niblicks and Jigger. The wood heads are made only in stock models selected and hand-somely finished in assorted stains. The shafts and workmanship are excellent, combining to make a serviceable and well-balanced club.

Left-hand clubs are made only in one model of Mid Iron, Mashie, Putter and Niblick.

Lady Prestwick

As our Lady Burke Grand Prize Clubs in the past has proven so satisfactory to the more experienced player, we have decided to further cater to the Lady players who are about to adopt this popular pastime, have selected certain models similar to our Lady Burke Grand Prize line in this grade of club.

The workmanship and finish in this line are of the usual Burke quality.

Burke Juvenile Clubs

Golf is the great out-of-door game that may be indulged in by father, mother, son and daughter — each getting equal pleasure and benefit from it. And just as you know the joy that comes from using a perfect club so your boy or girl will know it. Burke Juvenile Clubs are not toys — they are finely modeled and Burke-made golf clubs for red blooded youngsters.

These are intended for children from 3 to 8 years of age. They also consist of Driver, Mid Iron and Putter with bright colored plaid Caddy Bag, leather trimming with two miniature golf balls,

Per set \$5.00

Golf Club Repairs

With the exception of turning special models of wood heads (requiring ordinarily five days time) or staining and finishing any wood head supplied by us as a repair (this requires three days), we make it a point to return repaired clubs within 48 hours after receipt.

Golfers desiring wood clubs re-headed with exact duplicate of old head on the clubs, must remember that we must use the old head as a model in our lathes and that the old head is useless for any other purpose afterwards.

Clubs to be repaired must be sent prepaid.

The "Famous Five" Golf Balls of 1919

The **Silver King** balls are made in Great Britain, the other four are made in the United States. The **Covers** of these balls are specially constructed, very tough, and will not crack or chip.

The **Paint** on them will not chip or blister. It has the wearing qualities of a rubber paint.

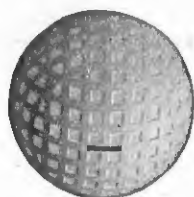

The **Weight** of each of the four balls made in the United States is fixed by a winding of weighted rubber (patent pending) which distributes the weight evenly and keeps the balance true.

Per dozen..... 15.00

Red Flash

31 dwt., 29 dwt.; recessed marking; great ball against the wind; approaching and putting qualities unequaled.

Each..... \$.85
Per dozen..... 10.00

Blue Flash

31 dwt., a very long driving ball especially good for approaching and putting; 29 dwt.; a ball that can be driven a great distance without effort; 27 dwt., a large floater very popular with women players.

Each..... \$.75
Per dozen..... 9.00

Taplow

27 dwt. standard size (floaters); mesh marked.

Each..... \$.60
Per dozen..... 7.20

All the foregoing balls not specified as "floaters" will sink in water.

Burke Caddy Bags

The discriminating golfer will demand bags which

- Look Best
- Carry most Comfortably
- Last Longest

As in shafts and clubs, **quality** is the dominant note in these Burke products. To meet these requirements we have designed a line of models which are meeting with universal approval.

They are good to look at, light and well balanced, especially when loaded with clubs.

The ball pocket is roomy. The materials are of the best (which means beauty and durability), and the workmanship excellent.

All of these advantages at low prices. Our line is made in four grades.

The Burke Hand-Made Line

Furnished with Patent Marker-Burke Bottom

No. 119. (See cut on center page.) Made of waterproof khaki pantasote with best quality russet strap leather trimmings. Fitted with Patent Marker-Burke bottom of solid sole leather. Hand-laced top and ball pocket. Four steel stays, solid brass hardware. The special Marker-Burke hood is full leather trimmed with brass lock buckle. Shoulder strap is of wide strap leather and padded with pantasote. Special designed handle.

This bag is practically indestructible and is hand made throughout.

This bag is absolutely without a peer in the market. It is the
